- 
- ☐ A) will have seen
- ☐ B) won't see
- ☐ C) haven't seen
- ☐ D) would see

**Question 21 of 24**

Generic 10 pts

**READING:****TECHNOLOGY IN OUR LIVES**

Technology plays a role in all aspects of our lives – the way we work, the way we shop, the way we communicate with each other, and the way we live at home. The speed of technological change in past one hundred years has been incredible.

The early telephone were very large, and they didn't even have dials or bottoms. You picked up a receiver and talked to an operator who make the call for you. Nowadays, cellular telephones fit in our pockets and we can use them, to make phone calls from anywhere to anywhere. In grocery stores and supermarkets, cashiers used to punch keys on cash registers to enter the price of each item. These days, scanners read bar codes on product packaging, and the prices are recorded by computerized cash registers. In some supermarkets, customers can even check out by scanning products themselves and paying by credit card, or without the help of a cashier. In the past, we made a trip to the bank to deposit or withdraw money, Now can use ATMs ( automatic teller machines) that are found everywhere. And many people now do their daily bank transactions at home online over the internet.

Modern technology has dramatically improved our lives. Personal computers enable us to create documents, store information, and analyze data \_\_\_ at work or at home. The internet allows us to sell and receive e-mail messages, connect us to the world wide web, and allows us to go shopping online from our homes. Digital cameras enable us to take photograph that we can instantly put on our computers to store, change, and send over the internet. Satellite communication connects doctors in one country with the patient in another country, bringing medical technology to remote places around the world. Miniature cameras that patients can swallow permit doctors to diagnose medical conditions without surgery. "smart homes" operated by computers turn lights on and off as people enter or leave rooms and enable homeowners to "call their houses" to turn on the heat or air conditioning, or even to start the coffeemaker!

What will the future bring? "Smart highways" will carry us to destinations that we program into our cars' computers. Computer chips that are implanted under our skin will hold our medical information in case of an emergency. Household appliances, such as refrigerators and stoves, will have miniature computers that "know" how we like to store or cook our food.

Many people feel, however, that technology has its price. With automated supermarkets checkout lines, ATMs and online banking, and internet shopping, we can meet our daily needs without having contact with other people. Life with technology can be very lonely! Also, many people are concerned about privacy. Technology make it possible for companies or the government to monitor our use of the internet. Our credit card numbers, bank account information, medical information, and other personal data are all stored. On computers. Protecting that information will be an important issue in the years ahead.

1. In general, the article states that technology has \_\_\_\_\_ our lives.
  - a. Limited
  - b. **Improved**
  - c. Increased
  - d. Protected
2. The most changes in technology have come in the past \_\_\_\_\_.
